

K62/C PARA-ARAMIDE TAPES

The Para-Aramide Tape “C” is a manufactured article made with special weaving yarns.

The used yarns are produced by carding of short Para-Aramide staples with some centimeters length.

The carded yarn (named C type) is softer and hairier than other yarns and it is less shiny.

The Para-Aramide “C” tapes are used for the protections in the Glass Industry (his price is cheaper than the other kind of tapes) and to produce the conveyor belts.

TECHNICAL AND SUPPLY DATA

Raw material	100% Para-Aramide spun fibre - short cut
Colour	Yellow
Kind of yarn	Carded and twisted
Kind of weaving	2 or more linked layers – it depends on the thickness
Density	0,6-0,67g/c.cm. +-10%
Available sizes	thickness : from mm.1 to mm. 12 width : from mm.8 to mm. 500
Working temperature	350 °C (400 °C tips)
Packing	Bobbins or rolls
